

# Interview Notes

Interviewee name	Juan Camilo López	Interviewer name	Julián Contreras
Date	25/01/2025	Topic	Los Andes Parking

Screening interview questions	Response notes
Basic questions	
1. What do you think about the current parking conditions at the university?	There are not enough parking spaces around the university for the huge number of students that need this service at the same time.
2. Have you faced major issues finding a parking spot on campus?	I pay in advance to have my own parking space. But before that I struggled a lot to find parking spaces, especially in the SD's building.
3. How important is a tech solution to improve parking management for you?	I believe a tech solution could be very useful in this context to provide an easy way to get the current parking information in the area.
Specific questions	
4. What features would you like in a real-time parking app?	The cost per hour, the distance to main buildings and the number of parking spaces left.
5. Would you use a reservation system for parking, even with an extra fee?	I wouldn't as I already have my own parking space. But without it I might use it in very specific contexts.
6. How helpful would waiting time estimates be for your daily planning?	Very useful in specific contexts such as days when I have exams and there is not a single space left in common parking places.
